

# Epic Radiant Integration Quick Reference Card

## PowerScribe® 360 | Reporting Desktop Client Integration

**NOTE:** Nuance employees are not authorized to adjust or configure the settings on a customer's PACS. The customer, or the customer's PACS representative, must make any necessary changes to the PACS configuration or settings.

### Feature Overview

In **Slave** mode:

- Application launch
- Single login/logout
- Mark exam as dictated/read

#### Multiple Sites and Multiple Integrations

- If the system has multiple *sites* and the integration type is master, duplicate the master mode integration under each site. If the integration type is slave do not set up duplicate integrations under each site. Set up all slave integrations under the primary site (first site created). When a user logs in, no matter what site they are working under, the system will read the slave integrations created under the primary site and confirm the workstation is set up with the correct directory structures.
- If there are multiple *integrations* on a system, and more than one uses file drop integration such as XML, you will need to ensure that each file drop integration drops files into, or reads files from, separate sub folders under **c:\Nuance** on the client workstation.

For example, an organization using both GE and Hologic might consider using the following paths:

- C:\Nuance\GE\
- C:\Nuance\Hologic\

### Site PACS Settings

This API integration operates as a Slave and **requires no configuration**. The integration works through the .NET Remoting port (9090).
